

Setting The New Standards

Reimotec presents Setting The New Standards at the K fair in Düsseldorf

Under the motto "Setting The New Standards" you will find our booth C21 at the K show from October 19th to 26th in hall 17. You will get an overview about our comprehensive portfolio. The booth shows solutions like SDS/IDC and TCS. Furthermore you can get more detailed information about the new High Speed Winder of Reimotec WT.

SDS/IDC

The SDS/IDC system (Slub Detection System / Inline Diameter Control) installed in lines around the world is in high demand also in the paper industry for the production of filaments. The measuring systems are key components in our lines as well.

TCS

With regard to strapping tapes, the 3rd generation of thickness and width controls will now be launched for inline quality control. Here the TCS Tape Control System can identify changes (for example viscosity variations of the raw material) in the extrusion process and their effects on the end product at an early stage to enable process parameters to be adapted accordingly.

High Speed Winder B2-250 EB2.LC

The new technological developments of Reimotec WT concern more specifically monofilament lines and are addressed at providing customers with real benefits. The new high speed winders type B2-250 EB2.LC are an evolution of the successful B2 series winders as used by the majority of high level monofilament producers all over the world for the last 30 years.

Interested in? Then visit us at our booth.

The whole team of Reimotec as well as Reimotec WT is looking forward to your visit.
