

LORANDI®

BULK MATERIALS TECHNOLOGY

www.lorandisilos.it

Welcome to the history and the future...

We have always focused our efforts on containing materials in the best possible way. We have always invested in developing technologies for moving materials around in factories in complete safety, economically and with great precision.

Lorandi today excels in providing a highly efficient tailor-made service, so our customers can leave their material handling entirely up to us.

We provide an all-round service, from initial advice to design and development. We do not stop, however, after the final testing stage. Our team of engineers provides assistance all over the world, and we can monitor your systems from our headquarters to ensure they continue to operate efficiently for a very long time.

We also implement a certified quality system that bears witness to our commitment to seeking ever improved quality – tangible proof of our excellence as a leading Italian manufacturer with customers all over the world.

Transport and installation

One good reason for coming to us is the excellent assistance we provide. An engineer will assist you at all times, during transport, installation, testing and certification of the system, all of which we handle ourselves. This guarantees that nothing is omitted or left to chance, and nothing is subcontracted, the best guarantee of reliable operation. We apply rigorous procedures throughout the process, from loading the components from silos at our production plant to installation on site.
